

Everyday cleaning

- Wipe with a soft, damp microfibre cloth and a mild detergent. Dry with a clean cloth to prevent water spots.
- For fingerprints and smudges on stainless steel, wipe **in the direction of the grain**.
- Clean weekly in normal use; daily in high-traffic washrooms.

What to avoid

- No abrasive pads, scouring powders or steel wool – they scratch the finish.
- No bleach, chlorine-based or strongly acidic cleaners – they can pit or discolour stainless steel over time.
- Don't leave cleaning chemicals sitting on the surface; rinse and dry after use.

Stainless steel shine

- For extra shine, use a dedicated stainless-steel cleaner or a few drops of olive/baby oil on a soft cloth, buffed along the grain.
- Remove limescale with a 1:1 white-vinegar-and-water solution, then rinse and dry.

Wall-mounted units

- Check fixings periodically and re-tighten if needed.
- Keep the back plate and wall area dry to protect both the fixing and the wall surface.

Bins & waste units

- Empty regularly to prevent odour and staining; rinse the inner surface when needed.
- For lidded/covered bins, wipe the lid hinge and edges where residue collects.

Longevity

- Used and maintained as above, our metal products are built for years of commercial service.
- Questions about a specific product? Contact our team – we're happy to advise.
